

## Ongoing pump sales as dairy expands production

- Sine pumps replace twin-screw pumps
- Proven sinusoidal benefits add sales

At one of the oldest privately owned dairies in Germany, both soft and hard cheeses, as well as butter, are produced for an international market, including France, Italy, Eastern Europe and Southeast Asia.

Pumps sales to this dairy have been ongoing for many years and where twin-screw pumps had damaged cheese curds, MasoSine SPS600 pumps replaced them and increased the yield.

More recently, the dairy needed a further pump for curd recovery and confidently ordered a Certa 200 pump with the knowledge of its gentle handling and proven hygienic design.

When the dairy increased capacity they called on MasoSine again to provide high flows in their new plant extension for curd production. A Certa 600 pump, with its high flows and all the known sinusoidal pumping benefits, was purchased for immediate installation in the new plant.
